DRIVE TRAIN CONFIGURATION NOTES:

- 1) Generally, configurations with higher top speeds tend to have reduced hill climbing capability (less torque) and reduced range.
- 2) Do not order drive train configurations with top speeds that exceed the physical or mental capabilities of the driver. Fast gurneys are usually not appropriate for children.
- 3) If the drive wheel pulley/sprocket size is increased, speed decreases and hill climbing capability increases.
- 4) If the motor pulley/sprocket size is increased, speed increases, belt life increases, chance of belt slippage in rain decreases, and hill climbing capability decreases.
- 5) Consider ST4M&B-M for more torque and less speed. Excellent for bariatric patients or where a speed limit is enforced. Typically ST4M motors are more efficient than ST3 motors when moving the same user at the same speed.
- 6) If the user needs more hill climbing capability or is experiencing poor battery life, the next size slower drive train configuration may help. Most dealers can change drive train configurations. Return of the gurney to the factory is seldom necessary.
- 7) The Panther and chain drive systems supplied with BOUNDER Plus H-Frame gurneys are quiet but can be heard over the motors, and a slight vibration can be felt.
- 8) A Chain drive is slightly noisier than a Panther drive. Chains need to be lubricated and cleaned, but in general are more durable than a Panther Drive. Manually pushing a chain driven gurney is more difficult if the brake release switch fails to operate or the batteries are removed.
- 9) Top speeds above 10 MPH are only recommended for users weighing less than 150 lbs. Select top speeds of 10.0 mph or less for users up to 200 lbs., 8.7 MPH or less for users between 200 and 300 lbs., and 8.0 MPH or less for users over 300 lbs.
- 10) Top speeds above are estimated. Depending on configuration, your gurney may be faster or slower. Specifically, foam filled tires reduce the chair speed by about 10%. Increased patient weight, power seating systems as well as poor battery condition also reduce the chair's top speed.
- 11) Tables revised on 2-20-2018.
